4. Technical Description

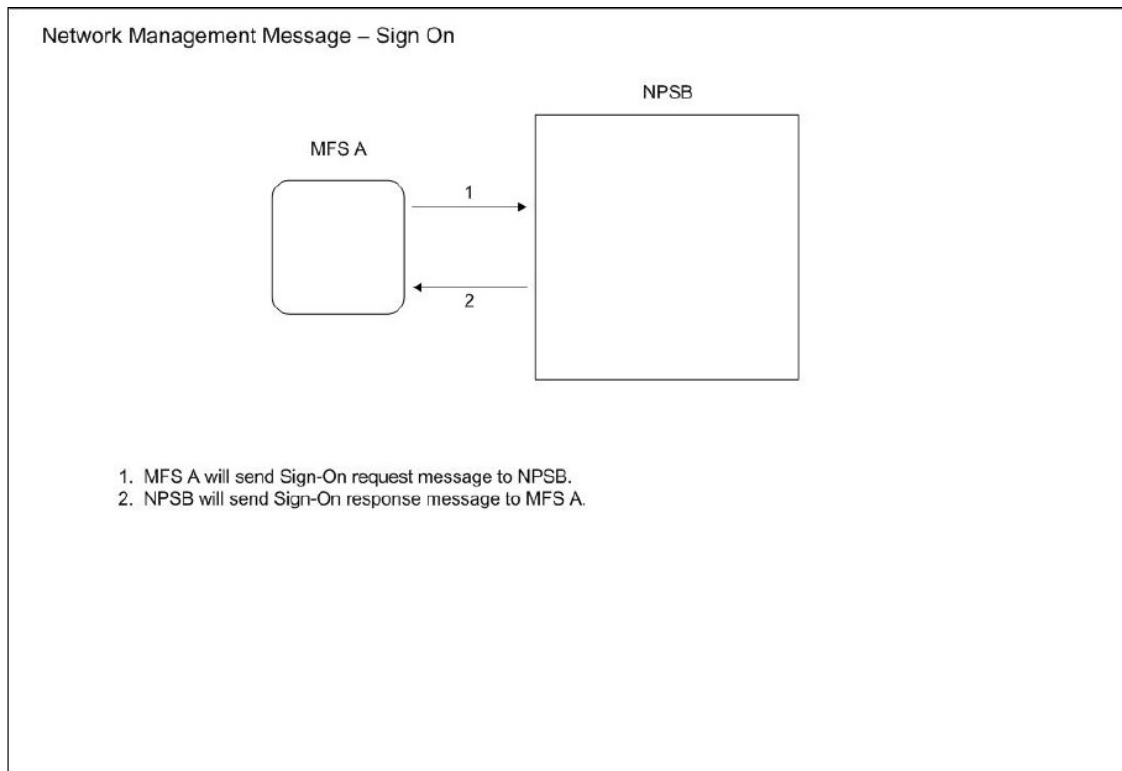

4.1. Integration Principles

Connectivity mode will be as follows:

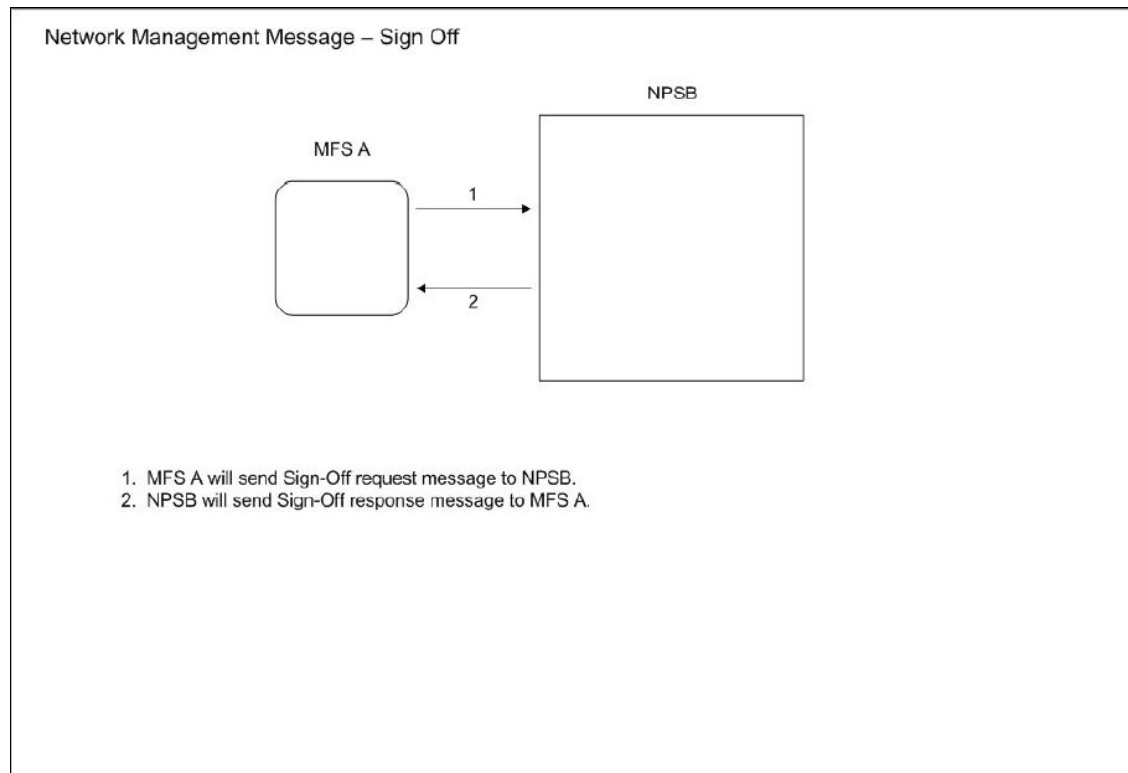

Server	:	NPSB
Client	:	bKash

CONFIDENTIAL

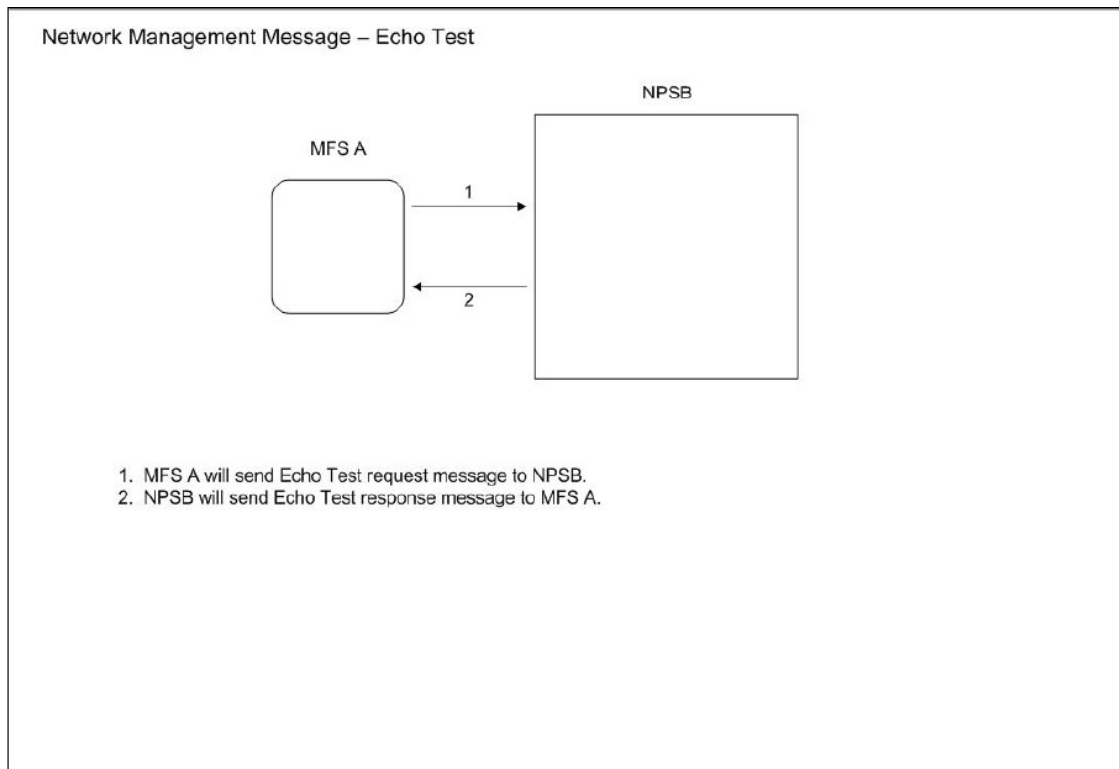

4.2. Flow: Network Management Message - Sign On

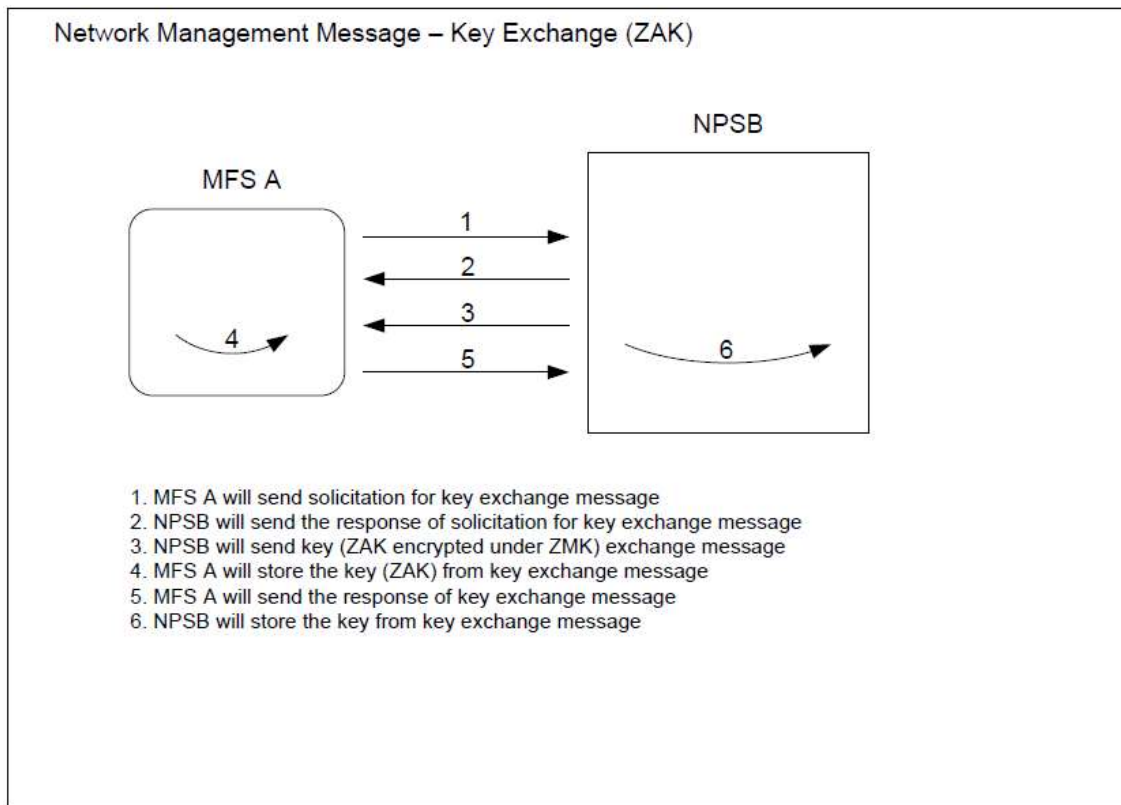

4.3. Flow: Network Management Message - Sign Off

4.4. Flow: Network Management Message - Echo Test

4.5. Flow: Network Management Message - Key Exchange (ZAK)

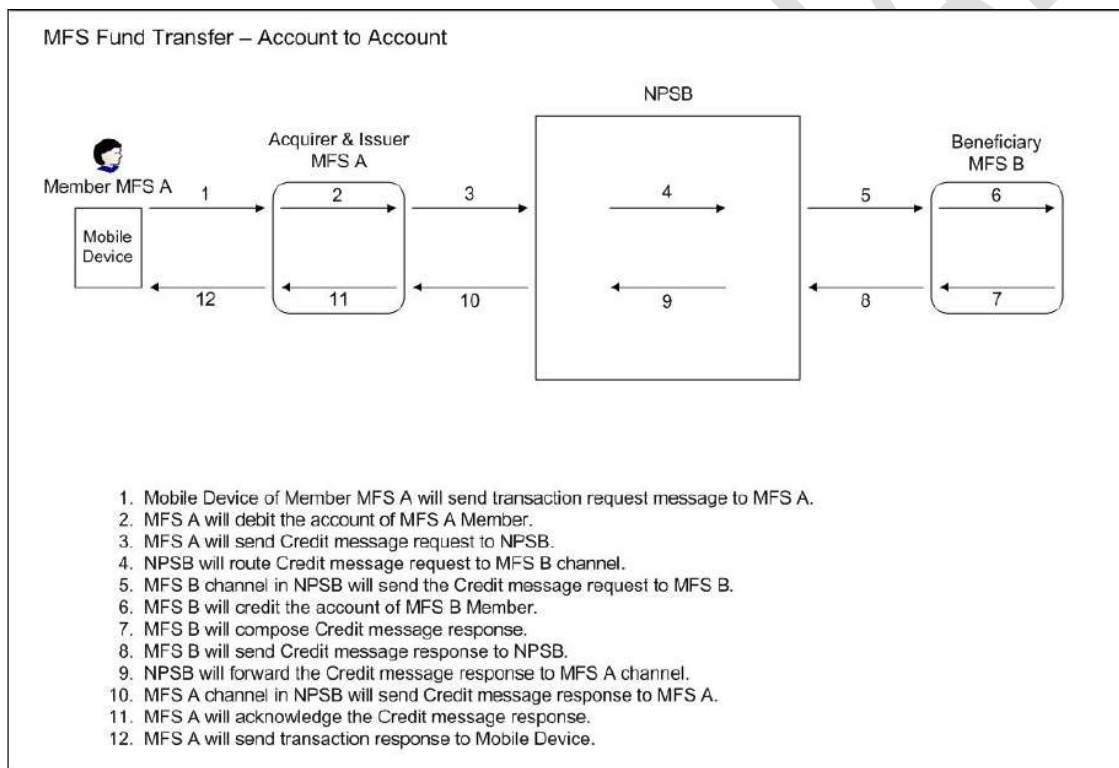

4.6. Flow: Funds Transfer - MFS Account to MFS Account/Wallet to Wallet (Credit Message Only)

There is no Agent involved in this transaction.

Member MFS A can do Funds Transfer to member of different MFS as follows:

1. On Mobile Device of Member MFS A, open the Application of MFS A and select the transaction that the customer would like to do. In this case, Funds Transfer to MFS Account.
2. First alternatives:
 - a. On the Application of MFS A, select the destination MFS as the beneficiary. In this example, MFS B.
 - b. On the Application of MFS A, enter the Destination Account Number.
3. Second alternatives (replaces point number 2). On the Application of MFS A, enter destination MFS member ID and Destination Account Number. For example, 000888 + 1912109099, member ID of MFS B + Destination Account Number).
4. The transaction flow is being described in the picture below:

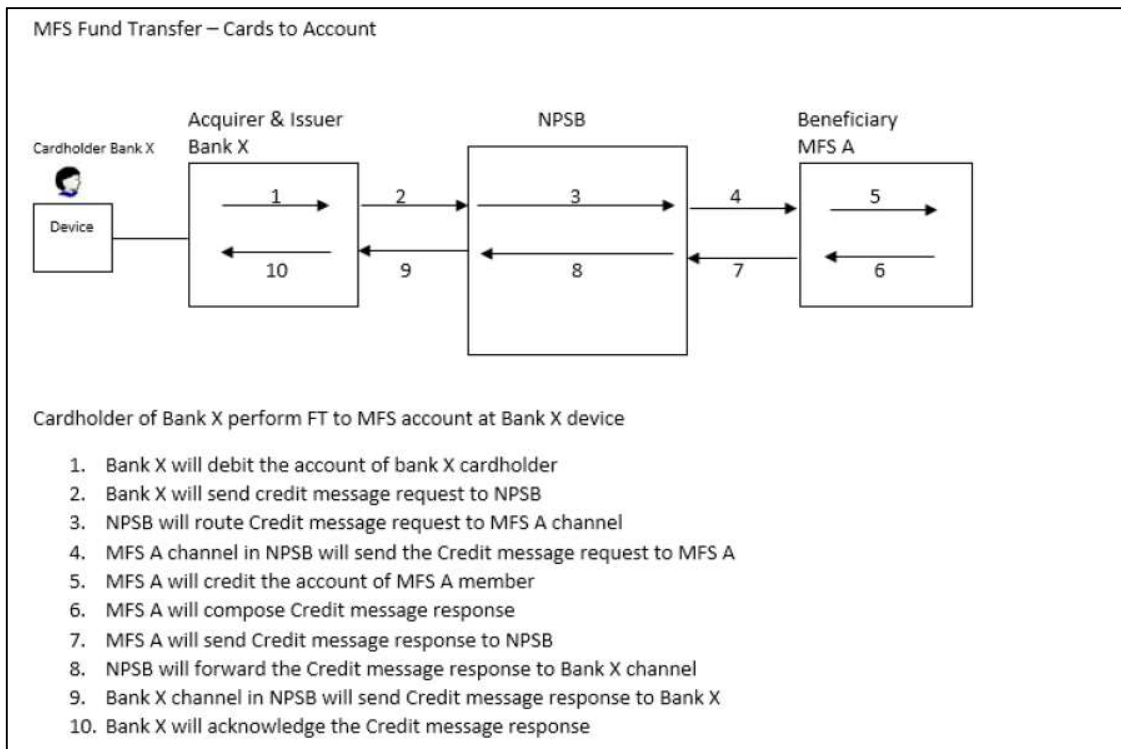

4.7. Flow: Funds Transfer - Cards to MFS Account (Credit Message Only)

There is no Agent involved in this transaction.

Cardholder of bank can do Funds Transfer to Member MFS as follows:

1. Cardholder of Bank X perform a Fund Transfer transaction
2. On the Bank X device, cardholder enter the Destination account number of MFS A. For example, 0008881912109099 (000888 + 1912109099, member ID of MFS A + Destination Account Number)
3. The transaction flow is being described in the picture below:

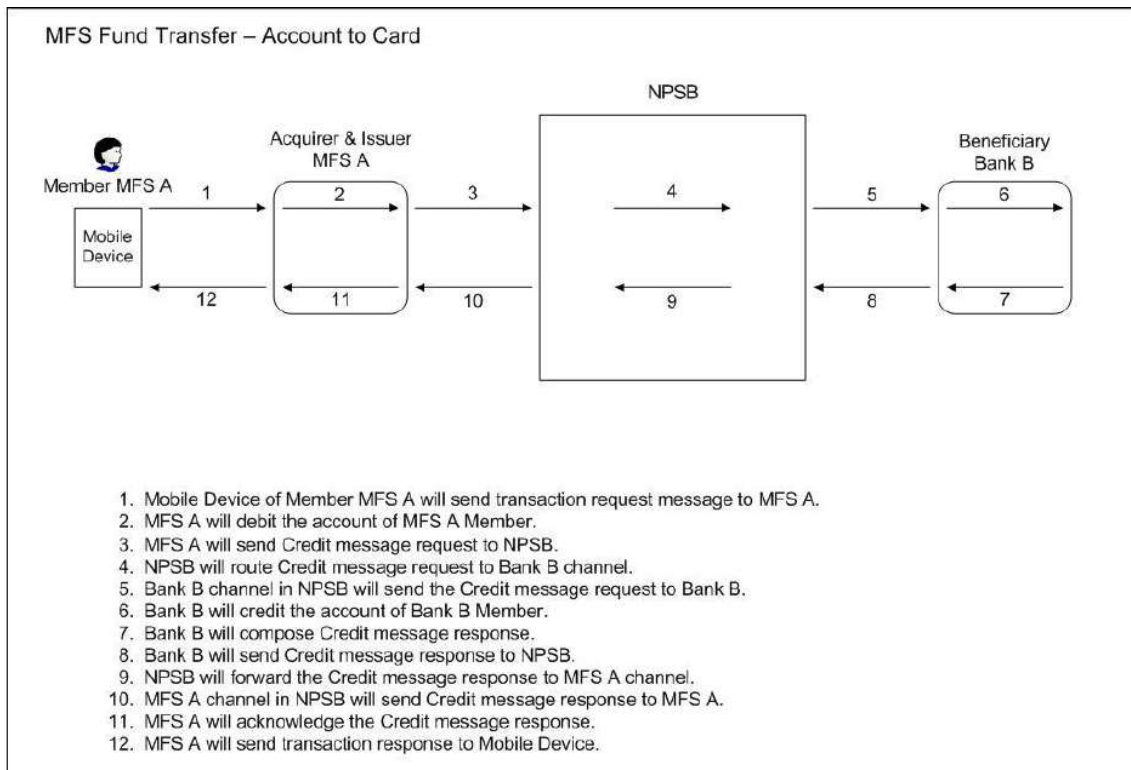

4.8. Flow: Funds Transfer - MFS Wallet Account to Cards (Credit Message Only)

There is no Agent involved in this transaction.

Member MFS A can do Funds Transfer to cardholder of bank as follows:

1. On Mobile Device of Member MFS A, open the Application of MFS A and select the transaction that the customer would like to do. In this case, Funds Transfer to Card.
2. On the Application of MFS A, enter the Destination Card Number.
3. The transaction flow is being described in the picture below:

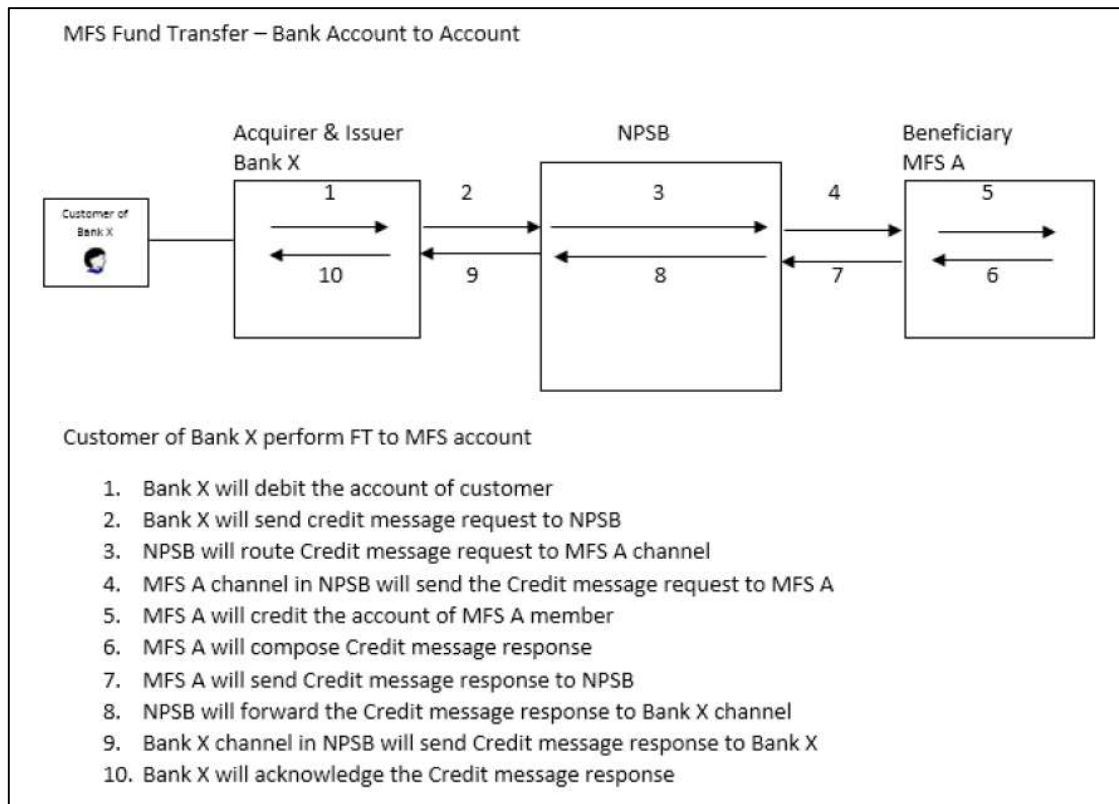

4.9. Flow: Funds Transfer - Bank Account to MFS Account (Credit Message Only)

There is no Agent involved in this transaction.

Customer of bank can do Funds Transfer to Member MFS as follows:

1. Customer of Bank X perform a Fund Transfer transaction to MFS A Account
2. Customer Bank X, enter the Destination account number of MFS A. For example, 0008881912109099 (000888 + 1912109099, member ID of MFS A + Destination Account Number)
3. The transaction flow is being described in the picture below:

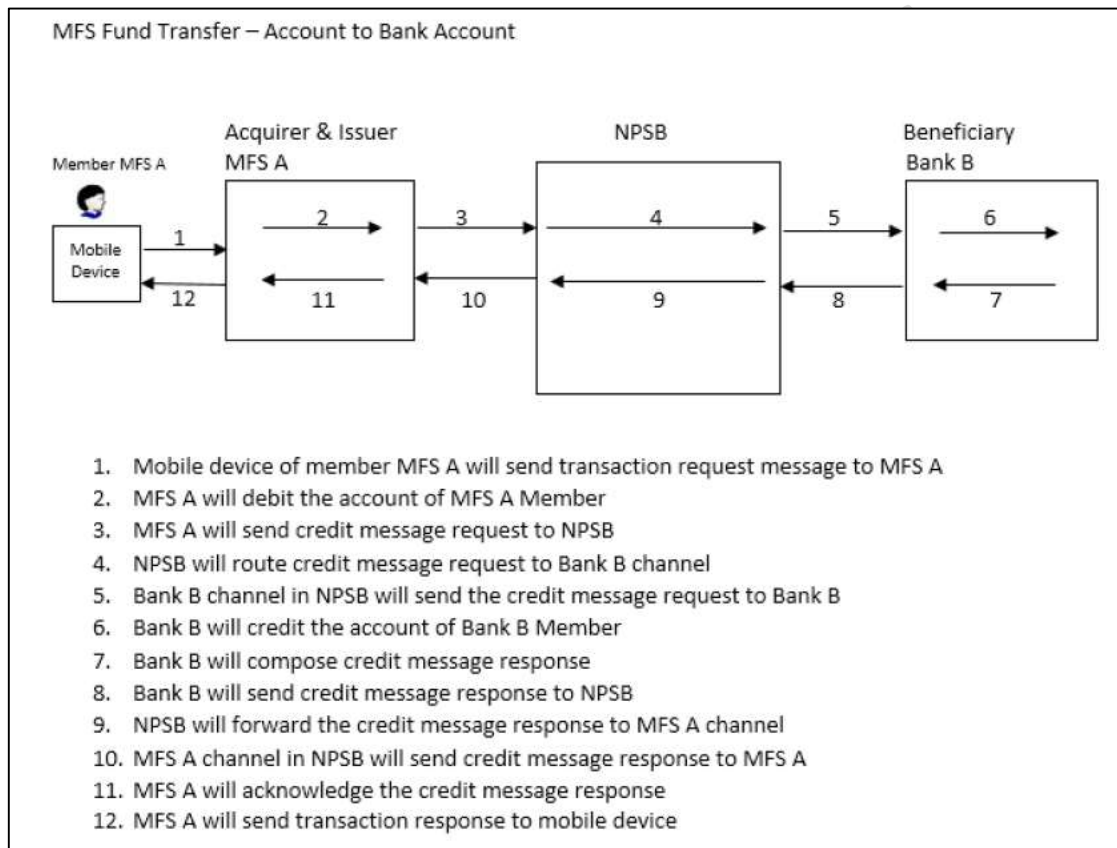

4.10. Flow: Funds Transfer - MFS Account to Bank Account (Credit Message Only)

There is no Agent involved in this transaction.

Member MFS A can do Funds Transfer to bank account as follows:

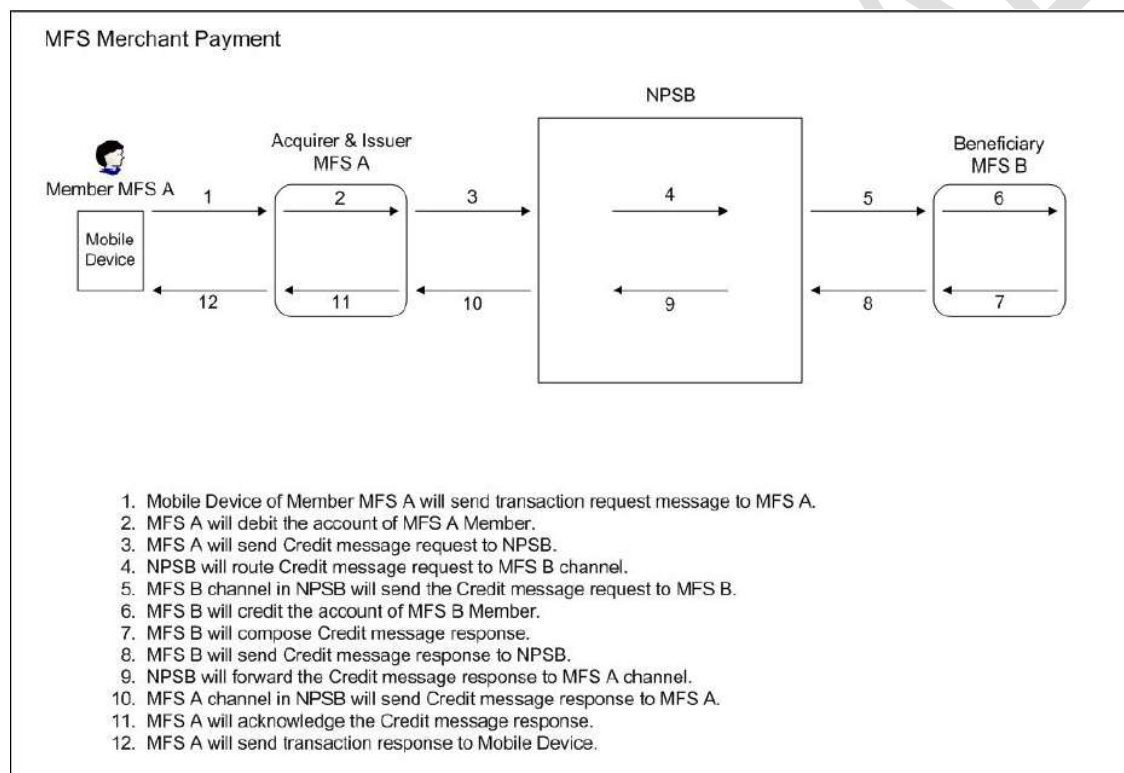

1. On Mobile Device of Member MFS A, open the Application of MFS A and select the transaction that the customer would like to do. In this case, Funds Transfer to Bank B Account.
2. On the Application of MFS A, enter the Destination Account Number of Bank B. For example, 0000901912109099 (000090 + 1912109099, member ID of Bank B + Destination Account Number)
3. The transaction flow is being described in the picture below:

4.11. Flow: Merchant Payment (Credit Message Only)

Member MFS A can do Payment to Merchant that is a member of different MFS as follows:

1. On Mobile Device of Member MFS A, open the Application of MFS A and select the transaction that the customer would like to do. In this case, Merchant Payment.
2. First alternatives:
 - a. On the Application of MFS A, select the destination MFS (MFS of Merchant) as the beneficiary. In this example, MFS B.
 - b. On the Application of MFS A, enter the Destination Merchant Account Number.
3. Second alternatives (replaces point number 2). On the Application of MFS A, enter destination Merchant MFS member ID and Destination Merchant Account Number. For example, 0008881912109099 (000888 + 1912109099, member ID of MFS B + Destination Merchant Account Number).
4. The transaction flow is being described in the picture below:

7. Interface Specification

Protocol: ISO8583 version 1987

Reference documents (shared by NPSB):

- WAY4™ Basic Host-to-Host Protocol (R/N:01.15-00000-20.06.2012)
- Detailed ISO8583 Message Specifications For Mobile Financial Services In NPSB (v1.07)
- Dynamic Key Exchange ISO8583 Message Specification For NPSB (v1.00)

Message Format:

Item	Description
Message length header size	Two bytes, high byte first
Length of "message length header"	Not included in calculation for "message length header"
MTID coding	ASCII-coded
Bitmap coding	Binary-coded

Field Presentation Options:

Field Presentation	Description
C	The field is conditional (may or may not be present).
CR	The field should present with the value inherited from Request message if the field is present in Request message.
M	The field must be present.
MR	The field must be present with the value inherited from Request message.

Field Format: [for details, please refer WAY4™ Basic Host-to-Host Protocol]

Field	Name of the Field	Format	Chars	Length	Coding
2	Primary Account Number	HLVAR	n	16..19	BCD
3	Processing Code	FIXED	n	6	BCD
4	Amount Transaction	FIXED	n	12	BCD
6	Amount, Cardholder Billing	FIXED	n	12	BCD
7	Transmission Date & Time	FIXED	n	10	BCD
10	Conversion Rate, Cardholder Billing	FIXED	n	8	BCD
11	System Trace Audit Number	FIXED	n	6	BCD
12	Local Transaction Time	FIXED	n	6	BCD
13	Local Transaction Date	FIXED	n	4	BCD
18	Merchant's Type	FIXED	n	4	BCD
22	Point of Service Entry Mode	FIXED	n	3	BCD
32	Acquiring Institution ID, Code	HLVAR	n	5..11	BCD
37	Retrieval Reference Number	FIXED	an	12	BCD
39	Response Code	FIXED	an	2	ASCII
41	Card Acceptor Terminal Id.	FIXED	ans	8	ASCII
42	Card Acceptor Identification Code	FIXED	ans	15	ASCII
43	Card Acceptor Name/Location	FIXED	ans	40	ASCII
46	Proprietary Field 46	LLLVAR	ans	99	BIN
47	Proprietary Field 47	LLLVAR	ans	99	ASCII
49	Transaction Currency Code	FIXED	n	3	BCD
51	Cardholder Billing Currency Code	FIXED	n	3	BCD
70	Network Management Information Code	FIXED	n	3	BCD
103	Account Identification	HLVAR	ans	99	ASCII
112	Additional Info	HLLVAR	an	999	BIN
128	Message Authentication Code	FIXED	an	64	BIT

Coding information:

Coding	Description
BCD	Binary Coded Decimals, left padding for odd length data [Zero (0) will be used for BCD padding]
ASCII	ASCII coded data
BIN	Binary data, length specified in bytes
BIT	Binary data, length specified in bits

Important notes about some fields:

Field	Name of the Field	Note
2 32	Primary Account Number Acquiring Institution ID, Code	Member ID in DE2 or Acquiring Institute ID in DE32 will be 6 digits numeric data. The list of NPSB member banks is given in Appendix-A . List of MSF operators with ID will be shared by NPSB shortly.
6 10 51	Amount, Cardholder Billing Conversion Rate, Cardholder Billing Cardholder Billing Currency Code	Currently NPSB is working with only BDT (050) currency code. But NPSB has kept the option open for future to use multi-currency. These fields can still be used with Conversion Rate = 1 and Currency fields (DE49 & DE51) = 050. If DE6 is present then DE10 & DE51 must be present.
18	Merchant's Type	For P2P transfer 4829 should be the only Merchant Category Code (MCC). But in case of bill/merchant payment it should be set according to merchant category. For example, please refer <i>Visa Merchant Data Standards Manual</i> , Section 2: Merchant Category Code Listing, published in October 2019, Link: https://usa.visa.com/content/dam/VCOM/download/merchants/visa-merchant-data-standards-manual.pdf
22	Point of Service Entry Mode	The target account/card number will be entered by customer manually and no need to enter PIN of target account/card. Therefore, 012 is suitable for DE22.
37	Retrieval Reference Number	NPSB recommended format for Retrieval Reference Number (RRN) is YJJNNNNNNNN, where Y is the last digit of the year, JJJ is a Julian date and NNNNNNNN is a counter unique during the day. The combination of DE37 and field DE32 must be unique to link the messages belonging to the same transaction into a message chain. RRN is used with other data elements as a key to identify and track all messages related to a given cardholder transaction. RRN is a key data element for matching a message to others within a given transaction set. RRN must be the same in all messages for the set. For example, a new RRN is assigned when a financial transaction is processed. The same RRN appears in all related messages: response, advice, and reversal.
39	Response Code	The list of Response Codes of NPSB which are applicable for MFS is given in Appendix-B .
47	Proprietary Field 47	Beneficiary MFS may receive other tag (919: For NPSB internal use, 924: If Target is an AMEX card) of DE47 on 0100 message. NPSB recommends to ignore all the tags if not specified in specification.
112	Additional Info	Acquirer/Issuer MFS will receive DE112 on 0110 message even if the Beneficiary MFS does not response with DE112. For each type of transactions the value is fixed and F0 is parent tag. All other tags are child of F0.

Identification of transactions / messages:

Field	Name of the Field	Message / Transaction	Fixed Value
70	Network Management Information Code <i>DE70 can be used to identify the type of Network Management Message.</i>	Network Management Message - Sign On	001
		Network Management Message - Sign Off	002
		Network Management Message - Echo Test	301
		Network Management Message - Key Exchange - Solicitation Message, request initiated by MFS A	162
		Network Management Message - Key Exchange - Key Exchange Message, request initiated by NPSB	161
112	Additional Info <i>DE112 can be used to identify the transaction type since Processing Code (DE3) for all Funds Transfer and Payment transactions are same (280000).</i>	Funds Transfer - MFS Account to MFS Account/Wallet to Wallet (Credit Message Only)	F016D20954574841545F545258D309544D46534654413241
		Funds Transfer - Cards to MFS Account (Credit Message Only)	F016D20954574841545F545258D309544D46534654433241
		Funds Transfer - MFS Wallet Account to Cards (Credit Message Only)	F016D20954574841545F545258D309544D46534654413243
		Funds Transfer - Bank Account to MFS Account (Credit Message Only)	F016D20954574841545F545258D309544D46534654423241
		Funds Transfer - MFS Account to Bank Account (Credit Message Only)	F016D20954574841545F545258D309544D46534654413242
		Merchant Payment (Credit Message Only)	F013D20954574841545F545258D306544D46534D50

7.1. Network Management Message - Sign On

128	Message Authentication Code	M	M	E4B76DF300000000

DE2 Primary Account Number

This field consists of 6 digits Beneficiary MFS Member ID followed by 10-13 digits Beneficiary Account Number (MFS Wallet Account Number).

If beneficiary MFS member ID + beneficiary account number consists of more than 19 digits, fill this field with only first 19 digits of beneficiary MFS member ID + beneficiary account number.

If beneficiary MFS member ID + beneficiary account number consists of less than 16 digits, right pad this field with zero until this field consists of 16 digits.

DE47 Proprietary field sub-elements

There is a set of sub-elements for P2P processing. Tags are applicable for request messages and may be present in response messages.

Tag ID	Tag Length	Description
927	Variable up to 99	Counterpart Account Id (Source Account Number)

DE103 Account Identification

This field is filled with the beneficiary MFS Account Number.

DE112 Proprietary field sub-elements

Field 112 is a private-use field (BER-TLV). The field contains multiple items of additional transaction information:

Tag Name	Data Type	Length Hex	Hex Data	Text Data	Description
D2	Binary	9	54574841545F545258	TWHAT_TRX	Tag Name: [To determine type of transaction]
D3	Binary	9	544D46534654413241	TMFSFTA2A	Tag Value: [MFS Fund Transfer Account to Account]

DE128 Message Authentication Code

This consists of the first 8 digits of Message Authentication Code generated by MFS's HSM followed by 8 digits of zeros. Whole binary data of the message is sent to HSM to generate MAC and then DE-128 into message.

7.6. Funds Transfer - Cards to MFS Account (Credit Message Only)

Field	Name of the Field	0100	0110	Sample Data
2	Primary Account Number	M	MR	0008881912109099 (Member ID + Target Account Number)
3	Processing Code	M	MR	280000
4	Amount, Transaction	M	MR	000001000000
6	Amount, Cardholder Billing	C	CR	000001000000
7	Transmission Date & Time	M	MR	1015112900
10	Conversion Rate, Cardholder Billing	C	CR	61000000
11	System Trace Audit Number	M	MR	152901
12	Local Transaction Time	M		112900
13	Local Transaction Date	M		1015
18	Merchant's Type	M		4829
22	Point of Service Entry Mode	M		012
32	Acquiring Institution ID, Code	M	MR	000090
37	Retrieval Reference Number	M	MR	211015112900
39	Response Code		M	00
41	Card Acceptor Terminal Id.	C	CR	90001000
42	Card Acceptor Identification Code	C	CR	999998999998998
43	Card Acceptor Name/Location	C		1 Gulshan Ave DHAKA BD
47	Proprietary Field 47 PDS927 Counterpart Account Id	M		9270168888884444555560 (Source Card Number)
49	Transaction Currency Code	M	MR	050
51	Cardholder Billing Currency Code	C	CR	050
103	Account Identification	M	MR	22814215673348 (Destination Account Number)
112	Additional Info	M	MR	F016D20954574841545F545258D30 9544D46534654433241
128	Message Authentication Code	M	M	E4B76DF300000000

DE2 Primary Account Number

This field consists of 6 digits Beneficiary MFS Member ID followed by 10-13 digits Beneficiary Account Number (MFS Wallet Account Number).

If beneficiary MFS member ID + beneficiary account number consists of more than 19 digits, fill this field with only first 19 digits of beneficiary MFS member ID + beneficiary account number.

If beneficiary MFS member ID + beneficiary account number consists of less than 16 digits, right pad this field with zero until this field consists of 16 digits.

DE47 Proprietary field sub-elements

There is a set of sub-elements for P2P processing. Tags are applicable for request messages and may be present in response messages.

Tag ID	Tag Length	Description
927	Variable up to 99	Counterpart Account Id (Source Account Number)

DE103 Account Identification

This field is filled with the beneficiary MFS Account Number.

DE112 Proprietary field sub-elements

Field 112 is a private-use field (BER-TLV). The field contains multiple items of additional transaction information:

Tag Name	Data Type	Length Hex	Hex Data	Text Data	Description
D2	Binary	9	54574841545F545258	TWHAT_TRX	Tag Name: [To determine type of transaction]
D3	Binary	9	544D46534654423241	TMFSFTB2A	Tag Value: [MFS Fund Transfer Bank Account to Account]

DE128 Message Authentication Code

This consists of the first 8 digits of Message Authentication Code generated by Issuer Bank's HSM followed by 8 digits of zeros. Whole binary data of the message is sent to HSM to generate MAC and then DE-128 into message.

7.7. Funds Transfer - MFS Wallet Account to Cards (Credit Message Only)

Field	Name of the Field	0100	0110	Sample Data
2	Primary Account Number	M	MR	6072589431607284 (Target Card Number)
3	Processing Code	M	MR	280000

DE2 Primary Account Number

This field consists of 6 digits Beneficiary MFS Member ID followed by 10-13 digits Beneficiary Account Number (MFS Wallet Account Number).

If beneficiary MFS member ID + beneficiary account number consists of more than 19 digits, fill this field with only first 19 digits of beneficiary MFS member ID + beneficiary account number.

If beneficiary MFS member ID + beneficiary account number consists of less than 16 digits, right pad this field with zero until this field consists of 16 digits.

DE47 Proprietary field sub-elements

There is a set of sub-elements for P2P processing. Tags are applicable for request messages and may be present in response messages.

Tag ID	Tag Length	Description
927	Variable up to 99	Counterpart Account Id (Source Card Number)

DE103 Account Identification

This field is filled with the beneficiary MFS Account Number.

DE112 Proprietary field sub-elements

Field 112 is a private-use field (BER-TLV). The field contains multiple items of additional transaction information:

Tag Name	Data Type	Length Hex	Hex Data	Text Data	Description
D2	Binary	9	54574841545F545258	TWHAT_TRX	Tag Name: [To determine type of transaction]
D3	Binary	9	544D46534654433241	TMFSFTC2A	Tag Value: [MFS Fund Transfer Card to Account]

DE128 Message Authentication Code

This consists of the first 8 digits of Message Authentication Code generated by Issuer Bank's HSM followed by 8 digits of zeros. Whole binary data of the message is sent to HSM to generate MAC and then DE-128 into message.

7.9. Funds Transfer - MFS Account to Bank Account (Credit Message Only)

Field	Name of the Field	0100	0110	Sample Data
2	Primary Account Number	M	MR	0000901234567890 (Member ID Bank + Dummy Number)
